# **PROJECT REPORT**

## **PERSONAL ASSISTANCE FOR SENIORS WHO ARE SELF-RELIANT**

### **1.INTRODUCTION**

#### **1.1 Project overview**

Whether you are managing your own absent-mindedness or taking care of a relative, medication reminders are one of the most useful aspects of daily medical care. From pill-minder trays to online calendars, a little help keeping track of multiple medicines can go a long way. At best, it is a way to save a little brainpower so you do not have to be super careful with your medication every time you take it. And in worst-case scenarios, effective medication reminders can be the difference between life and death.

Medication compliance is a serious problem – especially among older adults who battle with any number of difficulties from managing complicated medication regimes to impaired vision, arthritis, tremors, or dementia. Elders were facing difficulty with such daily activities as bathing, grooming, cooking, eating, or just getting to the bathroom often end up in hospitals or nursing homes, spending a disproportionately huge number of healthcare dollars, according to a report conducted for the U.S. Department of Health & Human Services. For far less money, perhaps 80 percent of these same elders could be made more self-reliant and healthier. New medication reminders, organizers, dispensers, alerts, planners, and apps are making huge inroads in the safer consumption of prescription drugs.

## **1.2 Purpose**

Non-medical home care often includes the service of “medication reminders” for people who have prescription medicines to take. It might seem odd that someone needs a reminder when there are pill boxes with the days of the week and more, but it is an important part of well-being. Some people are living with cognitive impairment due to some form of dementia or trauma and truly cannot remember to take a pill. Medications often come with crucial instructions such as taking them at a certain time of day, with or without foods, taking them with or without certain liquids, keeping them at specific temperatures, and each of these needs to be adhered to for the medicine to work or minimize possible side effects.

## **2.LITERATURE SURVEY**

### **2.1 Existing problem**

- One downside of the medicine remainder is that developers provide anonymized, aggregated user data to healthcare companies. Although this data is anonymous, and can be helpful to developing better healthcare treatments and systems, some users may not like the fact that their data is being collected and shared.
- On certain devices, notification reminders will be silenced when the device is on silent mode, so users must leave their sound on to get their reminders.

### **2.3 Problem Statement Definition**

In modern society, busy life has made people forget many things in day-to-day life. The elderly people and the people victims of chronicle diseases who need to take the medicines timely without missing are suffering from dementia, which is forgetting things in their daily routine. Considering this situation study has been done in this. The technologies of home health care which are currently used for improving this situation by reminding the scheduled of medicine, remote monitoring and update new medicine data of patients, which can be done by prescriber through web. Generally, for home-based health care the arrangement includes communications, imaging, sensing and human computer interaction technologies embattled at diagnosis, treatment, and monitoring patients without disturbing the quality of lifestyle.

It can be possible the development of a low-cost medical sensing, communication and analytics device that is real-time monitoring internet allowed patients physical conditions. Internet of Things (IoT) network will provide active and real-time

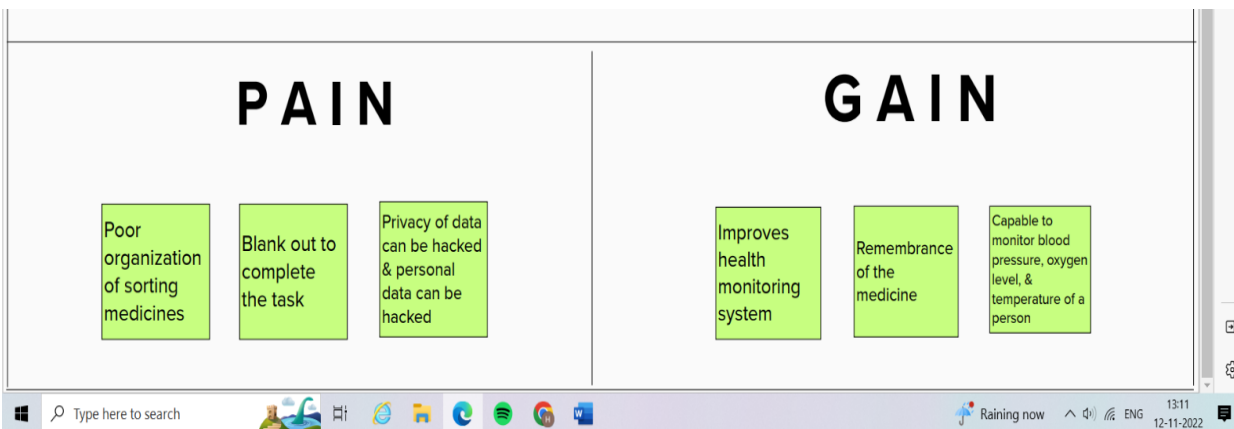

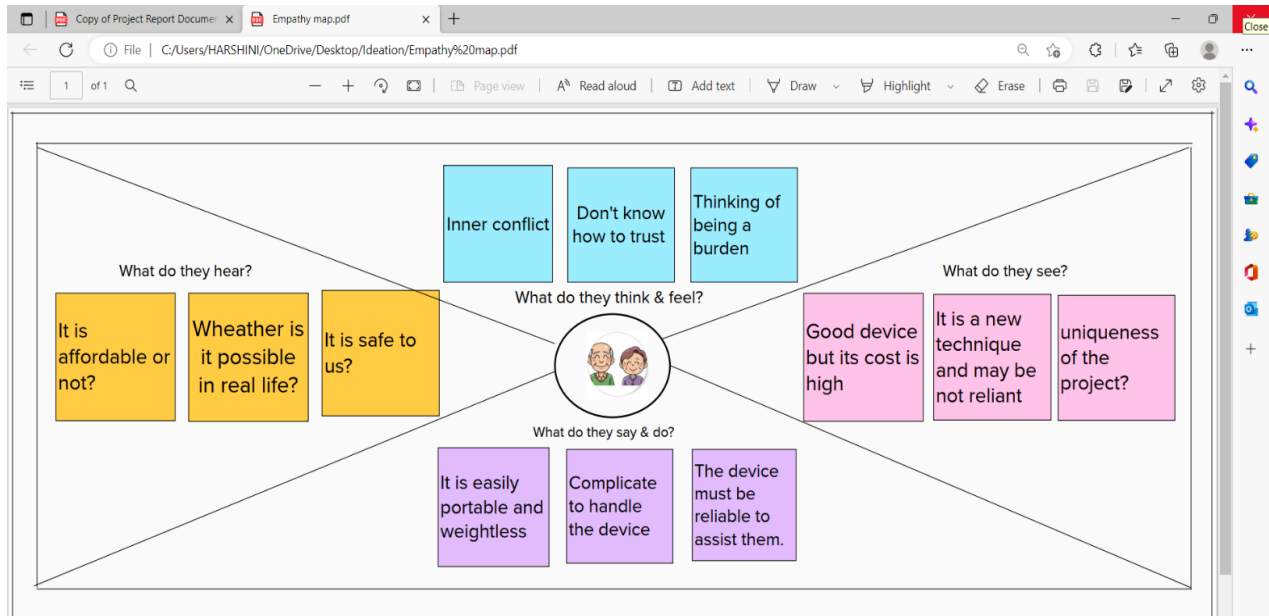

appointment of patient, hospitals, caretaker, and doctors apart from this the secured data transmission from source point to destination for the purpose of remote monitoring there is need of the architecture of a low-cost embedded platform for Web-based monitoring.

To overcome these problems, we have designed an application using node-red through cloud. This will have the required data of the patient details and their medicine report description. At the time of their medicine schedule, this system application (app) will notify to the user by displaying with the medicine name with voice command instead of an alarm.

### 3. IDEATION & PROPOSED SOLUTION

#### 3.1 Empathy Map Canvas

## 3.2 Ideation & Brainstorming

File | C:/Users/HARSHINI/OneDrive/Desktop/Ideation/Brainstrom.pdf

Page view

Re

### Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare  
15 minutes to collaborate  
30 minutes recommended

**Before you collaborate**

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

1. **Prep gathering**  
Confirm who should participate in the session and send an invite. Share relevant information or pre-work ahead.
2. **Set the goal**  
Think about the problem you'll be focusing on during the brainstorming session.
3. **Learn how to use the facilitator tools**  
View the Facilitator Tooltips for tips on using the interactive session.

**Define your problem statement**

What problem are you trying to solve? Frame your problem as a how might this statement. This will be the focus of your brainstorm.

**Key rules of brainstorming**

To run an unscripted and productive session

- Stay in focus
- Encourage wild ideas
- Defer judgment
- Listen to others
- Don't fear criticism
- It's possible, for now!

**Brainstorm**

Write down any ideas that come to mind that address your problem statement.

10 minutes

**Facilitator Tools**

1. **How might we...?**  
2. **Brainstorming**  
3. **How might we...?**  
4. **Brainstorming**  
5. **How might we...?**  
6. **Brainstorming**

**Head notes**

Head notes are a way to capture your thoughts and ideas during a session. They are a great way to keep track of your ideas and to share them with others.

**Brainstorming**

Brainstorming is a process of generating ideas. It's a time when you and your team brainstorm ideas to solve a problem. It's a time when you and your team brainstorm ideas to solve a problem.

Read aloud | Add text | Draw | Highlight | Erase | Print | Save | Share | Settings

### Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

10 minutes

**Smart Assistance**

Smart Assistance is a feature that helps you find the right words and phrases to use in your writing. It's a great way to improve your writing and make it more professional.

**Cloud Platform**

Cloud Platform is a feature that allows you to store and manage your data in the cloud. It's a great way to keep your data safe and accessible from anywhere.

**Monitoring Devices**

Monitoring Devices are a feature that allow you to track and monitor your data. They're a great way to keep track of your progress and make sure you're on track.

**Smart Devices**

Smart Devices are a feature that allow you to use your data in a smart way. They're a great way to make the most of your data and get the most out of it.

**Health Monitoring**

Health Monitoring is a feature that allows you to track and monitor your health. It's a great way to keep track of your health and make sure you're healthy.

### Prioritize

Your team should all be on the same page about what's important moving forward. Prioritize your ideas on this grid to determine which ideas are important and which are feasible.

10 minutes

**Importance**

Importance is a measure of how important an idea is. It's a way to rank ideas based on how important they are to your team.

**Feasibility**

Feasibility is a measure of how feasible an idea is. It's a way to rank ideas based on how easy they are to implement.

**After you collaborate**

You can export the mind as an image or pdf to share with members of your company who might find it helpful.

**Quick add-ons**

1. **Share the mind**  
Share a view link to the mind with collaborators to keep them in the loop about the session after session.
2. **Export the mind**  
Export a copy of the mind as a PDF or PNG to share with others. It's a great way to keep a record of your ideas.

**Keep moving forward**

**Strategy Mapping**  
Create the components of a new idea or strategy.

**Customer experience journey map**  
Visualize customer needs, motivations, and activities for an experience.

**Brainights, opportunities, opportunities & threats**  
Identify strengths, weaknesses, opportunities, and threats (SWOT) for developing a plan.

**Share template feedback**

### 3.3 Proposed Solution

S.no	Parameter	Description
1.	Problem Statement	Now a days elders were facing many health issues, to overcome that they must take their regular scheduled medicine routine. By nature, as they become elder, they were forgetting to take their medicine on time. To overcome this problem medicine remainder app is created for the remembrance of medicine.
2.	Idea / Solution description	To overcome this problem, a web application is created with detailed information about the medicine and when the patient wants to take (time) the medicine. It can be notified by an alarm with vibration and voice command.
3.	Novelty / Uniqueness	Uniqueness in this project is, both the deaf and dumb people can also be notified by the means of vibration so that they can also be benefited.
4.	Social Impact / Customer Satisfaction	All design decisions may be assessed and revaluated using these personas, keeping the user and their perspective in mind.
5.	Business Model (Revenue Model)	Through our web application the revenue can be made in the form of pop-up advertisements, overlay ads from third party services.
6.	Scalability of the Solution	Large number of people can be supplied with the wearable devices to ensure their safety and they can easily set their medication time in the web application.

### 3.4 Problem Solution fit

<p><b>1. CUSTOMER SEGMENT(S)</b> <span>C</span></p> <p>Citizens who are in need of external support to take care of themselves for medical assistance .</p>	<p><b>6. CUSTOMER CONSTRAINTS</b> <span>C</span></p> <p>Accurate measuring for the time. Limited usage for only pill and capsules drug dosage. Control of energy saving devices.</p>	<p><b>5. AVAILABLE SOLUTIONS</b> <span>C</span></p> <p>The solution of this sophistication is supplemented by the development of an advanced technology supported pill dispenser called the GSM based automatic call dispenser</p>
<p><b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <span>C</span></p> <p>This Application helps the patient to remind medicine through voice assistance . It helps the user to do their daily routine without seeking help from other people.</p>	<p><b>9. PROBLEM ROOT CAUSE</b> <span>RC</span></p> <p>Side-effects affecting thinking and balance. Sedatives and tranquilizers, which are often prescribed for sleep or for anxiety. Examples include zolpidem and lorazepam (brand names Ambien and</p>	<p><b>7. BEHAVIOUR</b> <span>BE</span></p> <p>The patient need to update the information about their medication application</p>

<p>3. TRIGGERS <span>TR</span></p> <p>People simply forget, skip or stop taking their medications, which leads to non adherence . Trigger helps people to integrate healthy behavior by using technology in a very simple way</p>	<p>10. YOUR SOLUTION <span>SL</span></p> <p>Building a reliable technology that can address all the customer needs while being reliable and secure ensures efficient functioning.</p>	<p>8. CHANNELS of BEHAVIOUR <span>CH</span></p> <p>The data stored in the access with the application can be help of internet</p>
<p>4. EMOTIONS: BEFORE / AFTER <span>EM</span></p> <p>Despite effective treatments , depression may often be unrecognized and untreated . 2,3 many persons in the community with depression see a general physician . so primary care setting is pivotal when considering how to optimize the treatment for depression and others forms of emotional distress in the community</p>		

## **4. REQUIREMENT ANALYSIS**

### **4.1 Functional requirement**

1. Proper Medication - Proper Time for medication Intake of tablets
2. Tablets on Time - Remainder for tables Via Voice message
3. Disabled people – Vibration mode is designed for their requirement

## **4.2 Non-Functional requirements**

### **Usability**

Smart Medicine Box usability is the characteristics of the User Interface that facilitate Use, to make it easier for the users to perceive the information presented by the User Interface, to understand and decide based on that information.

### **Smart**

Smart Medicine Box, like other computer systems, can be vulnerable to security breaches, potentially impacting the safety and effectiveness of the device.

### **Reliability**

The probability of Smart Medicine Box will perform a required function without failure under static conditions for a specified period.

### **Performance**

Medical device testing is the process of demonstrating that the device will reliably and safely perform in use.

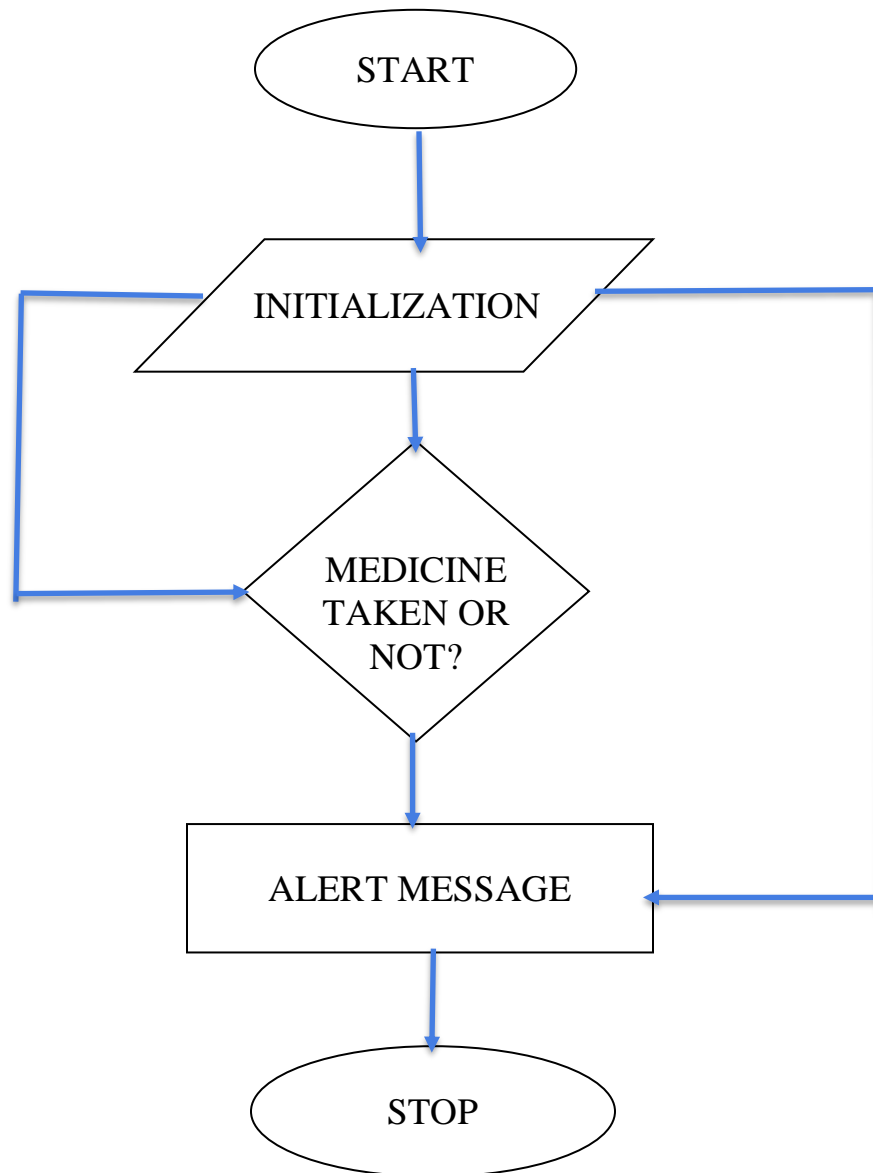

Availability Our smart pill box is programmable that enables medical caretakers or clients to determine the pill amount and timing to take pills, and the service times for every day.

### **Scalability**

In Feature, we can upgrade the smart medicine box to the health care assistant to monitor our healthcare and book appointments with doctors.

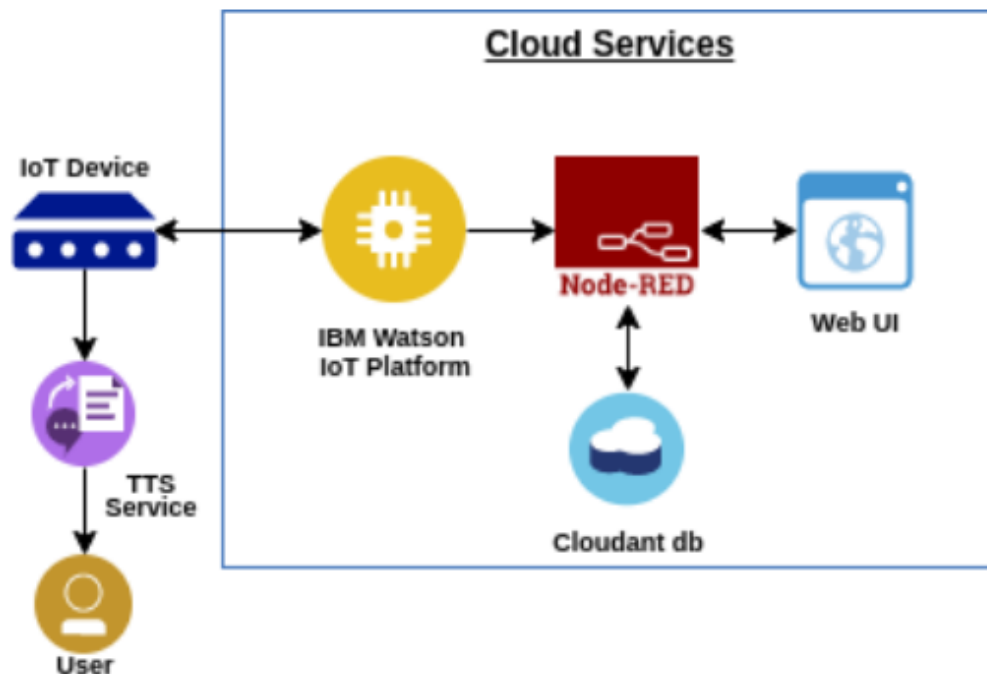

## **5. PROJECT DESIGN**

### **5.1 Data flow Diagram**

## 5.2 Solution & Technical Architecture

- As elders were not remembering of their tablet routine, they were facing many health issues.
- By use of this project, they need not to worry about their medicine remainder because this device automatically notifies the people to take their medicine on time.
- By creating portable web application, they were able to use this application without facing any diffabilities.
- As it remains the elder to take their medicine, their health will also maintain in good condition. ∞ If the medicine time arrives, the web application will send the medicine name to the IoT Device through the IBM IoT platform.
- The device will receive the medicine name and notify the user with voice commands and vibrate.

## 5.3 User Stories

### Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement	User Story Number	User Story / Task	Story points	Priority	Team Members
Sprint 1	Website development	USN-1	As a user, they must develop a website for the user information.	5	High	Harshini
Sprint 2	Admin user page	USN-2	As the user want to interact with the doctor, a new page is created	5	High	Akshaya
Sprint 3	Node red implementation	USN-3	To connect the both user node red is created	5	High	Gokul
Sprint 3	Deployment	USN-4	Data of the patient will be stored in the cloud & the project is deployed	5	High	Indra Prasath

## **6.PROJECT PLANNING & SCHEDULING**

### **6.1 Sprint Planning & Estimation**

#### **Sprint 1**

- Sprint one is about web Development, by which the user can access easily.
- As the app get started, it requires the user's detail so that they can store their data in cloud platform.
- Therefore, the user needs to enter their medicine details and their time to take off.

## Sprint 2

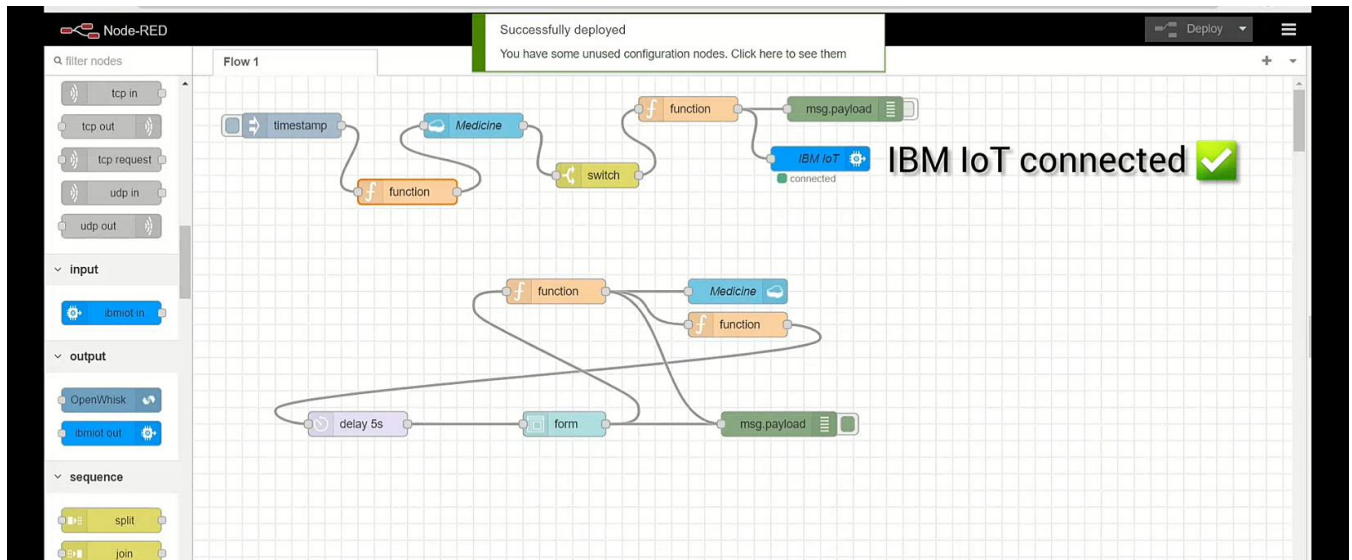

- To collect the details of the user, an admin page is created to store their details.
- And to get the details from the user and to transfer it the cloud platform an admin page is created using HTML code.
- 

## Sprint 3

- In this sprint, already created app and admin page backend program is created.
- By using this node red, the remainder will automatically reach the user by voice command with the medicine name.
- The cloud database connections were made in this sprint.

## Sprint 4

- Once all the connection were made, the testing process is deployed
- And as a result, the app notifies the user by voice command with the required medicine name.

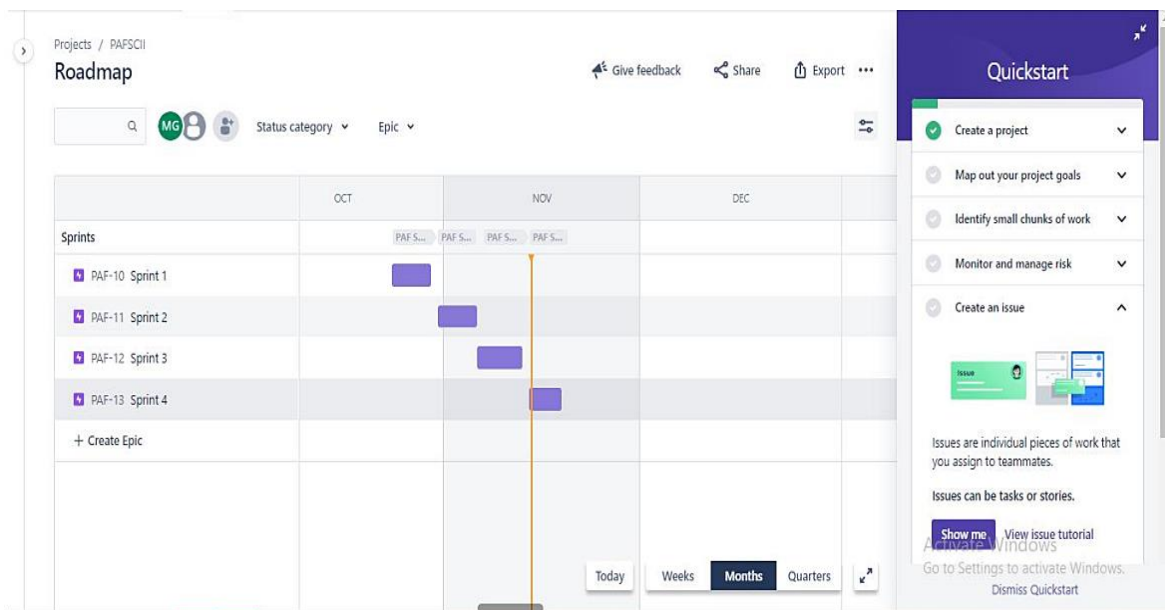

## 6.2 Sprint Delivery Schedule

### Milestone Template:

Sprint	Sprint Topic	Start Date	Expected Delivery
Sprint 1	Web development	29-10-2022	5-11-2022
Sprint 2	Admin page	7-11-2022	14-11-2022
Sprint 3	Node red	16-11-2022	23-11-2022
Sprint 4	Deployment	23-11-2022	30-11-2022

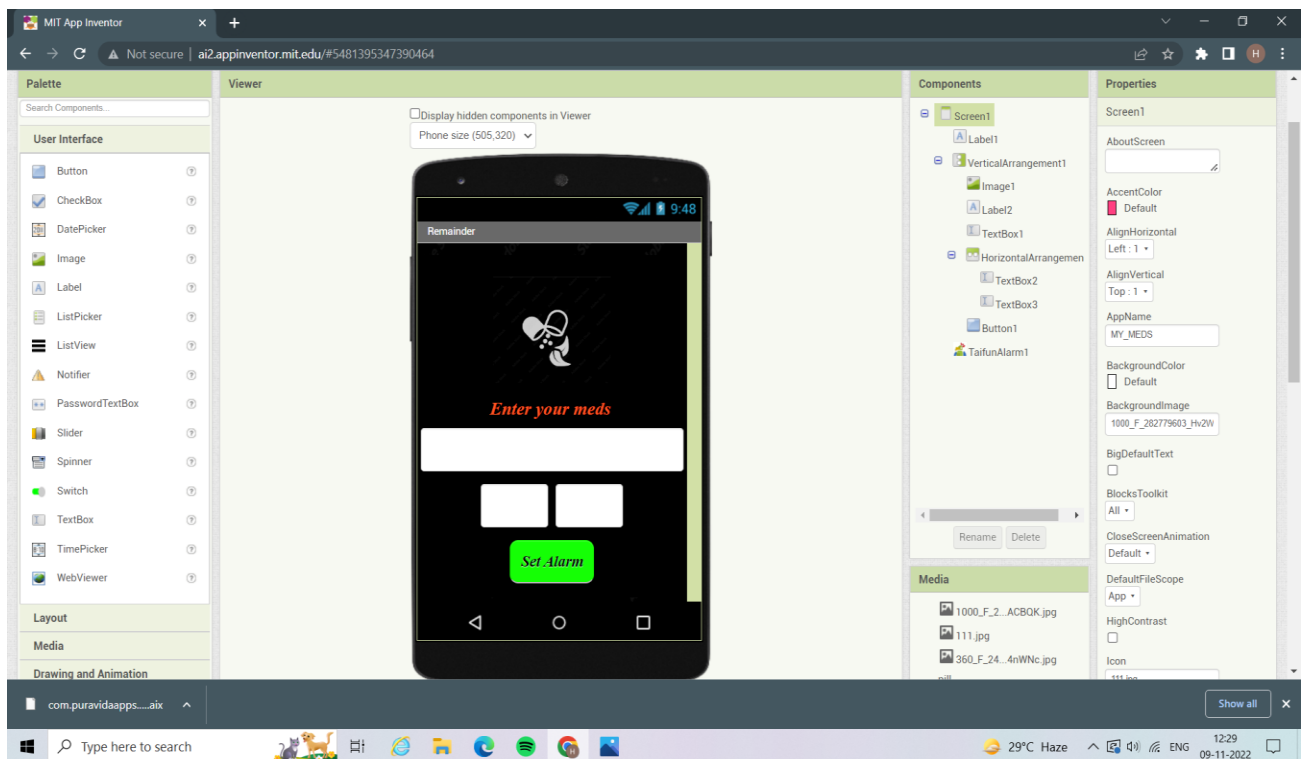

## 6.3 Reports from JIRA

		T	NOV	DEC	
Sprints		PAF Sp...	PAF...	PAF Sp...	PAF...
⚡ PAF-10 Sprint 1	DONE				
⚡ PAF-11 Sprint 2	DONE				
⚡ PAF-12 Sprint 3	DONE				
⚡ PAF-13 Sprint 4	DONE				

## 7. CODING & SOLUTION

## **8. TESTING**

### **8.1 Test Cases**

A test case might be created as an automated script to verify the functionality per the original acceptance criteria. After doing manual exploratory testing, QA testers might suggest other functionality be added to the application as well as updated test cases be incorporated in the automated test suite.

<b>Test case ID</b>	<b>Feature Type</b>	<b>Component</b>	<b>Test Scenario</b>
SMS Notification TC	Twilio SMS Notification	Node.JS (Server)	Verify user is able to Receive SMS when Users Medication Time arrives
Backend TC	App Configuration	Node.JS (Server)	It should get the data from the frontend and process data for Twilio SMS notification and DB store
Frontend TC	Dashboard UI	Home page (Client)	It should get the data from the frontend and process data for Twilio SMS notification and DB store
Datebase_TC_OO4	MongoDB	MongoDB (Server)	Verify that it can store the medicine reminder notes in the cloud DB

Test case ID	Feature Type	Component	Test Scenario	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation	BUG ID	Executed By
LoginPage_TC_OO1	UI	Home Page	Verify whether user is able to access the URL	<a href="https://node-red-psifx-2022-11-13.au-syd.mybluemix.net/ui/#/0?sock">https://node-red-psifx-2022-11-13.au-syd.mybluemix.net/ui/#/0?sock</a>	URL	Able to access the URL	failed to access in mobile	Fail	Wrong Browser selected	NO	101	RUFUS AR

## **10. ADVANTAGES & DISADVANTAGES**

### **ADVANTAGES**

- The software can help people set free from remembering the medication time and names.
- It helps the caretaker to determine the medication time, which can be variable sometimes, depending upon the patient's severity.
  - The software is very user-friendly; the need not install any external app by the patient, economic for the caretaker too.
  - The single software can be used by the caretaker for managing multiple patients at the same place.
  - The details of the time scheduled, and patients' intake is stored in the database for future reference easily.
  - The overall stress of patients and caretakers is reduced and maintained under control by the software.

### **DISADVANTAGES**

- The software currently can only alert the patient to take medicine, we cannot ensure whether they have taken it or not.
- The software currently can only alert people with SMS, it cannot make phone calls to help the illiterate.

Elderly people should be aware of how to use the application.

There is no way to determine what happened as it only gives the remainder to take the medicine Internet connection is required.

## **11. CONCLUSION**

This leads to the conclusion that, unless patients indicate otherwise, all patients should receive a reminder or ‘reminder plus’ is that actively encourages patients who are unable to attend to cancel their appointment and to reschedule if further appointments are required. The reminder should be sent around 3 days in advance of the appointment as timing of a reminder, between 1 and 7 days prior to the scheduled appointment, has no effect on patient attendance behaviour. This will allow sufficient time for patient cancellation and health service reallocation of the appointment to another patient or allow the clinician to undertake care-related administrative tasks. To optimise attendance, cancellation and rescheduling there needs to be robust procedures to ensure that patient contact details are up to date and that there are easy to use, probably multiple, systems for cancelling appointments that suit the needs of the patients, e.g., automated SMS cancellation, answerphone, e-mail, etc. Robust 24-hours-per-day rescheduling procedures should allow easy rescheduling of appointments for patients. Finally, an effective reminder system will increase the workload on clinical staff and alternative time will need to be scheduled for staff to undertake health-care-related administration. Further research is required to investigate the differential effectiveness and cost-effectiveness of an ‘optimised’ reminder system over and above usual reminder systems.

There were few studies investigating the differential effectiveness of alternative types of reminders for different segments of the population and this we believe is a key area for further research. Nevertheless, we have used the findings of our review to suggest possible reminder alternatives for key groups of patients who appear to be at higher risk of not attending appointments, namely deprived, ethnic, substance abusers, and those with comorbidities and illness. Simple reminders and automated reminders to attend may be ignored or overlooked and may put these patient groups at a disadvantage compared with general outpatient populations. Reminders with direct personal contact might be appropriate in these groups. To facilitate attendance in the most at risk, vulnerable groups we have suggested that reminder systems of increasing intensity and interactivity could be introduced to ensure that disparities in health-care opportunities are not compounded. We have introduced the concept of a sequential reminder intervention in order to reach the greatest number of patients and maximise attendance, although their effectiveness in this context needs to be established. The re-engagement of these patient groups with treatment after they have missed their appointment may be important if they have health problems that need ongoing treatment. Intensive approaches, such as ‘stepped reminders and patient navigators’ have been effective at increasing attendance at screening and

immunisation programmes in disadvantaged and vulnerable populations, although their effectiveness in this context needs to be investigated.

Reminder systems are a complex intervention, because of the potential number of interacting components within the interventions, the requirement for tailoring of the intervention to the health service and the number of difficulties and behavioural changes from those receiving and delivering the reminder. Therefore, in addition to following the general recommendations provided above, health service managers will need to tailor their reminder systems to meet the needs of the service and the patient population that it serves. This review provides a range of findings that will inform health service managers' decision-making processes. To this end, we are producing a practice guide to help health service managers consider specific issues that may be relevant to the design of reminder systems for their health service.

## **12. FUTURE SCOPE**

- The project can be enhanced with many other features that can serve senior citizens even better. The product currently is a simple basic version which can only send SMS alerts on time. Some other additional features that are planned to be incorporated with this existing product are listed below:
- The dashboard can be made more versatile for the caretakers to manage patients medicine intake time and to monitor how it changes every day, by this a new or speculated time can be scheduled individually.
- The system can be enhanced with a smartwatch or health devices so that the health conditions can be continuously connected with the hospitals, and doctors to supervise and help them during emergencies.
- The system can relate to hardware product that stores and automatically opens the container and alerts with a voice message.

The system can further relate to the medical shop so that the hardware system automatically senses the tablet counts and alerts the medical shop to deliver the medicine.
